In the case of an implantable cardioverter defibrillator (ICD), a battery must be provided to power the ICD. The battery is normally carried in a pectoral pocket on the chest of the patient. In addition, the ICD must be coupled to a cardiac pacemaker and the interconnecting wires may also introduce site pain. Therefore, there exists a need for implantable devices, methods and systems that avoid the problems associated with known systems. It is an object of the present invention to provide devices, systems and methods for safely and reliably delivering high energy shocks to the heart. It is another object of the present invention to provide devices, systems and methods for performing pacing and cardioversion/defibrillation functions from within a vein, artery or vein-artery combined site in the heart. It is another object of the present invention to provide devices, systems

and methods for performing pacing, cardioversion/defibrillation and other functions from within the coronary sinus of the heart. It is yet another object of the present invention to provide devices, systems and methods for monitoring the onset of tachyarrhythmias to determine the appropriate timing of cardioversion/defibrillation shocks and/or pacing pulses delivered to the heart. It is yet another object of the present invention to provide devices, systems and methods for selective sensing and/or pacing within the heart, including from within the coronary sinus of the heart.
