Category:3D imaging software to present to the jury the results of the blood tests that were not admitted into evidence. He argues that his due process rights were violated because the trial court refused to make the tests available for the defense's use. This issue has already been decided adversely to defendant in Commonwealth v. Brown, 511 Pa. 53, 511 A.2d 1063 (1986), in which we held that the due process clause does not require the prosecution to provide a blood-alcohol test to an indigent criminal defendant. The judgment of sentence is affirmed. NOTES [1] We note that there is no statement of questions involved in the lower court appeal. [2] Subsection C of the lower court's order provided as follows: "A review of the sentencing transcript does not reflect any specific reasons why the sentence imposed was not appropriate for the specific offender in this case. The court did indicate that it is concerned with the person who comes to court intoxicated, and this was the sole reason for the sentence imposed, but the court did not articulate any specific reasons why the sentence was not appropriate for this specific offender." Q: Adding Redis Service on Heroku : Connection error : Error reading client certificate from keychain Trying to add Redis Service on Heroku. I got error: Connection error : Error reading client certificate from keychain Code on Heroku : heroku addons:add redis:heroku A: I had the same issue and fixed it by adding the certificates to my ~/.aws/credentials. Here is a tutorial on how to set this up if you are using Amazon Web Services. It has been widely accepted that memory T cells can serve as a source of help for germinal center B cells. However, recent evidence suggests that memory T cells can also negatively regulate B cell responses, especially those of B cells that express high levels of MHC class II (i.e., antigen-presenting cells). The goal of this application is to understand how T cells of different memory phenotypes regulate helper responses to T cell-independent antigens. Aim 1 of this proposal is to determine the role of memory T cells in negative regulation of B cells and to characterize the mechanism(s) involved. We will directly test whether memory T cells downregulate T cell-independent helper responses in vivo, in models of foreign and polyclonal immune responses
